

## ORAL MOTOR TOYS

Simple toys can facilitate oral exercises for older babies 12-16+ weeks of age. Some go deep into the mouth for chomping and chewing and lots of posterior/deep tongue movement. Some encourage tongue extension and side-to-side movement. Babies benefit from doing exercises while in tummy time, while laying on their backs on large exercise/birth balls, peanut balls, or in Guppy Pose with head extended. Prepare for some drool! Links subject to change.
